### Stage Accompany equipment controlling facility

### Version 1.0

This disk contains an installation procedure for the Stage Control program.

### How to use

Start the computer in the normal way. Then insert the installation disk in the A: or B: drive log on that drive by entering
A:<RETURN>
or B:<RETURN>.
Next start the install batch file by entering installa <RETURN> or installb <RETURN>.

The computer will now install the new program onto the harddisk. After the installation the installation disk must be put in a save place and the computer must be reset like the way described above. Then the new program will automatically start up.

### Remarks

After quitting from the program you have to confirm the shutdown utility to park your harddisk. This frees you from damage to the harddisk during transportation.

If you already have a version of the PMS control program then that will still be available. In that case enter 'N' to the shutdown utility and type PMS and the enter key.

Succes and good luck from the Stage Accompany development team.
