New PA system

During the last months, people at Stage Accompany worked at fast speed to finish the powerful Performer series cabinets.

This new PA system for small to big live music applications will be introduced at the Franfurter Messe in March.

The Performer series will fill the gap that was left open due to the limited maximum acoustic output of the Compact Driver.

In depth research at Stage Accompany resulted in 10 dB extra maximum output for the Compact Driver.

The new driver is much more rugged than the previous one due to forced air cooling which guarantees maximum reliability under severe circumstances. Tests in real world situations are very promising. Technicians who worked with the Performers were all impressed of the sonic quality and the high sound pressure level of the system.

The accompanying preliminary datasheet gives an overview of the total system and its possibilities.

We are now ready to start production of the first serie and we would give all importers the possibility to order on that serie with a special interesting **reduction**. The amount of reduction will depend on the number of systems that are ordered.

Please order within two weeks so we can determine the amount of reduction. This offer is only valid until the end of **januari 1990!**

The Performers will be introduced worldwide in several magazines. We will advertise with a price in ECUs.

Regarding the **small monitor** that we asked marketing figures for, we received untill now only **one** reaction. Please send them to us now!
